

ACL (IB503) Executive Summary:

ACL is a bio-pharmaceutical and medical device company with **patented (in US, Canada, and China)** technologies and products.

We have achieved our first goal via BrainGlucose™ by providing timed release of brain energy as circadian therapy to eliminate nightmares, night sweats, hallucinations, which have been saving lives and dignity of many early and especially mid-stage Alzheimer's patients; and to help diabetics to avoid nocturnal hypoglycemia for better sleep and protection from seizures, coma or even death.

By communications with FDA and experts in biopharmaceutical fields, we hope to obtain some funding for elevating our delayed and sustained release of energy product to new drug status for Alzheimer's disease.

We are eagerly looking for investment or partnership to advance our game changing, groundbreaking technology product, a noninvasive medical device, AddMem™, which will be also the world's first ever product for memory consolidation and recovery.
