

Project IB505: Revolution AI Data Management System – Make AI Better

\$126 Billion Serviceable Addressable Market	8 Employee Size	~100% Expected Customer Growth	\$4+ M 2025 Rev (E)
--	---------------------------	--	-------------------------------

Company Overview

Company developed a better solution for Large Language Models (LLM) which is essential for AI data management.

With the proprietary 3DI (Three-Dimensional Inference) technology, it automates identifying, classifying, cleansing, and extracting data with remarkable accuracy.

3DI is a revolutionary framework that bridges the gap between unstructured data chaos and structured insights, applying unsupervised cataloging to "see" and "understand" the data - much like a human - but with much greater speed and consistency.

This is a "must-have" in the coming AI era.

Additional Highlights:

- ✓ Extract context from raw data, enabling AI to make more accurate predictions and deliver better insights.
- ✓ 3DI harvest & Creates Structure to Any and All Data Across All Environments
- ✓ Classify All File Types
- ✓ Validate and Secure Data
- ✓ NO need machine learning to classify data;
- ✓ NO human-in-the loop (HITL); Fully automated

Competitiveness

3DI's Uniqueness in the Competitive Landscape
